Table 1. Specific Telepractice Considerations by CLQT+ Subtest

Subtest(s)	Considerations
Personal Facts **Generative Naming** **Story Retelling (Traditional Administration only)** **Semantic Comprehension (Traditional Administration only)**	• Requires high-quality audio for examinee and examiner • *Generative Naming and Story Retelling:* A timing device is required to monitor all time limits for each task, as noted on the record form
Symbol Cancellation **Clock Drawing** **Symbol Trails** **Mazes** **Design Generation**	• Requires high-quality audio and video for examinee and examiner • Peripheral camera/device should be placed in a stable position over the tabletop that shows examinee's work surface to view and score each written response • Ensure response booklet is opened only to the correct page when directed. • Examiner can complete sample items in the examinee's response booklets prior to sending and can also demonstrate onscreen during the testing session. • Examiner points to stimuli on screen and may fill in sample items on the digital copy of the response booklet displayed onscreen with the writing utensil tool (if a good one exists in the teleconference platform). • A timing device is required to monitor all time limits for each task, as noted on the record form • Use the response book Q-global® digital asset to gesture to the response booklet as noted in the administration directions. Open it from the Q-global Resource Library and share screen to the examinee
Confrontation Naming **Story Retelling (Aphasia Administration only)**	• Requires high-quality audio and video for examinee and examiner • Share screen and show stimuli to examinee as directed • A timing device is required to monitor all time limits for each task, as noted on the record form
Design Memory **Semantic Comprehension (Aphasia Administration only)**	• Requires high-quality audio and video for examinee and examiner • Share screen and show stimuli to examinee as directed • Peripheral camera/device should be placed in a stable position to show examinee's pointing/responses • Design Memory: A timing device is required to monitor the 3 minutes time limit, as noted on the record form
